Facial eczema in sheep and cattle

Are you testing pasture & faeces?

- Check.
- Monitor.
- Review.

Check pasture spore counts to identify increased risk.

Monitor GGT - has FE exposure affected the liver?

Monitor exposure - look at faecal spore counts to see what stock are ingesting.

Review protection - ensure zinc levels are adequate and prevention is on track.

Beef + Lamb New Zealand's Sheep Poo Study has found spores across the motu, including Otago and Canterbury.
